

KINGFISHER BIOCIDAL WASH

DESCRIPTION.

Kingfisher BIOCIDAL WASH is a deeply penetrating, aqueous biocide solution which removes moulds, algae, moss and lichens from external surfaces. It can be used to restore the natural colour of an existing external surface or as a preparation to improve the adhesion quality for a proposed decorative coating.

The biocidal wash destroys all micro – organisms due to its synergistic formulation which displays a large spectrum of activity and a maximum efficiency of treatment.

APPLICATION.

Dilute 1 part Biocidal Wash with 4 parts clean water.

Apply using a brush or low pressure spray ensuring thorough surface wetting.

Leave for 5 – 6 hours or preferably overnight for full biocidal action to develop, and then remove any residual debris by brushing or power washing.

Note : Complete washing down is not necessary.

COVERAGE.

1 litre of diluted biocidal wash will cover approximately 4 square metres.

Note. 5 litres of concentrate covers a surface area of approximately 100 square metres.

PACKAGING.

Kingfisher BIOCIDAL WASH is supplied in 5 litre Plastic Bottles.

HEALTH & SAFETY.

This product in concentrated form is classified as corrosive. In diluted form as an Irritant. ALWAYS read the label before use.
