

KINGFISHER EASI-MIX

Advanced Plasticiser Concentrate.

DESCRIPTION.

Kingfisher EASI-MIX APC is an advanced formula, highly concentrated plasticiser which conforms to BS 4887 specification for Mortar Plasticisers.

This new advanced formula product is extremely effective in improving the workability of cement, renders and mortars without the addition of lime.

It also reduces the water / cement ratio, increases adhesion and provides increased resistance to frost.

Kingfisher EASI-MIX APC is supplied in specially designed, non spill, easy to use, durable, compact 1 litre containers. The container has a built in measuring chamber which ensures the correct volume of Supamix is delivered to the mix every time.

This feature also provides the added advantage of controlled usage with no product wastage.

METHOD of USE.

Gauging water should be made up by adding 8 to 10 litres of water to 10 to 12 mls of **Kingfisher EASI-MIX APC**, or, when using mechanical mixers, add the **EASI-MIX** concentrate direct to the mixer at the rate of 10 mls per 25kg bag of cement.

1 litre of **Kingfisher EASI-MIX APC** makes up to 100 mixes.

DO NOT exceed the recommended usage rates.

SAFETY.

Kingfisher EASI-MIX APC is classified as an irritant and should be handled accordingly. Always read the label before use.

Further detailed Health and Safety information on this product is provided on the Kingfisher Materials Safety Data Sheet; copies of which are available from the Kingfisher Technical Dept.
