

KF-18 MASONRY BIOCIDES MICROEMULSION CONCENTRATE

(Contains 3-Iodo-2-Propynyl-Butyl Carbamate 1.25% w/w)

FOR USE ONLY AS A MASONRY BIOCIDES

DESCRIPTION.

Kingfisher KF-18 MASONRY BIOCIDES is a third generation fungicidal concentrate containing the highly effective IPBC (Polyphase) active ingredient. KF -18 is a micro emulsion and is highly effective in the treatment of a wide variety of fungal organisms including both dry and wet rots, moulds and plaster fungi.

The formulation is completely free of petroleum based solvents and when mixed creates a clear, bicontinuous micro emulsion which possesses excellent penetration properties.

MIX INSTRUCTIONS

Dilute 2 litres of **Kingfisher KF-18 MASONRY BIOCIDES CONCENTRATE** with 23 litres of water.

APPLICATION.

Kingfisher KF-18 MASONRY BIOCIDES can be applied by brush or coarse spray at a rate of 1 litre of diluted product per 2–5 sq. metres.

PACKAGING.

Kingfisher KF-18 is supplied in 4 litre plastic containers. (Produces 50 litres of final product)

HSE No. 6529.

The Control of Substances Hazardous to Health (COSHH) Regulations will apply to the use of this product at work.
